

NSK 2021

TIME TO SWITCH

NEW Ti-Max Z95L

Select between mist or jet spray at the flick of a switch with the world's first two way spray technology. When extra safety is needed the water jet provides maximum protection while still offering optimum cooling, then when conditions allow switching back to mist is a breeze. No equipment modification is needed, put the control back in your hands.

Solutions & Promotions from NSK

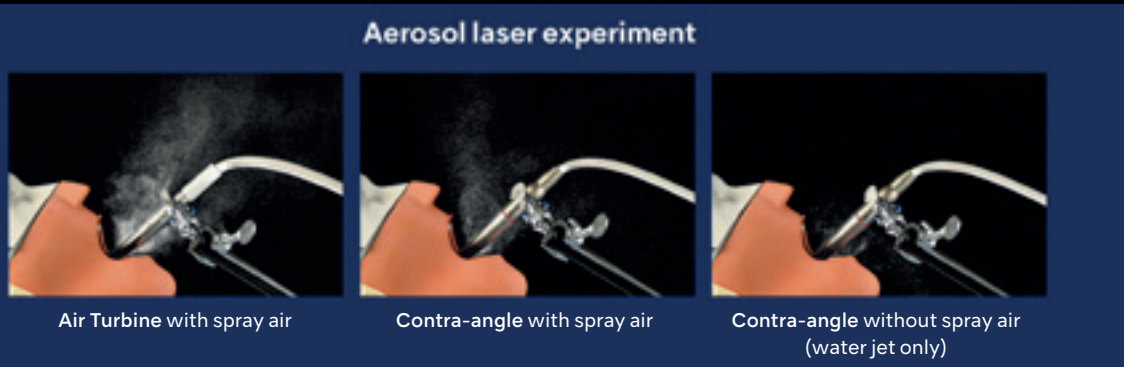

New Ti-Max Z95L

TIME TO SWITCH

Spray air contributes significantly to spray mist in dental handpieces. Speed Increasing handpieces produce less aerosols compared to turbines. To reduce aerosols further, the Ti-Max Z95L has now been fitted with an innovative feature that allows you to switch between a traditional water/air mix and a water jet only. This feature is unique to NSK on Ti-Max Z95L, Z45L and Z25L models. Turning off the spray couldn't be easier, just twist the switch.

Go Electric with NSK & reduce aerosols

Accurate and clean margins are the most important factor when achieving the best digital scan. Electric driven speed increasing handpieces are the best option when looking for the control and torque you need to produce accurate margins.

What is a speed increasing handpiece?

A contra-angle that does everything a turbine (high speed) does and uses the same FG burs. BUT it has incredible 'torque' originating from the micromotor which puts it in a league of its own and puts you in total control - no more loss of power as you come into contact with the tooth. Choose your speed. Save time cutting preps.

What motor do I need to use speed increasing handpieces?

It must be an electric micromotor (NOT an air motor) as the gears inside (usually 1:5) need the electrical power to run at a high speed. These ultimate brushless electric micromotors can be retro fitted by an engineer or come as an option when buying new chairs. NSK's NLX micromotors offer a powerful 3.4Ncm of torque.

Can I run my old contra-angles (slow speed handpieces) on it?

Yes, but with a micromotor and a control panel you have the option to slow the speed right down. You can now also use handpieces with internal spray and fibre optics.

Will there be any wires showing?

A built-in version will not show any wires.

Always check compatibility to upgrade.

Non-retraction valve prevents suckback/contamination of the water line

Options for Speed Increasing Handpieces (1:5)

Model	S-Max		Ti-Max

SMILEBOX

In the current climate, new treatment protocols have to be considered. With this in mind Siobhan Kelleher RDH has devised what a possible oral care protocol could look like.

Could this be an immediate approach?

NSK and Young Innovations have brought together a complimentary range of products under the umbrella name of SmileBox. The products cover many elements of Siobhan’s protocol and offer everything for professional oral hygiene care.

Flange of the cup fits flush against the handpiece. Only 18mm.

Elite Original cup (screw-in) fit perfectly with the handpiece.

Prophy handpiece, 4:1 speed reduction for reduced splatter. Enhanced durability achieved through a unique design preventing polish/dust from entering the handpiece.

Paste defence system

Polish Paste with reduced splatter. Fluoride free, neutral pH and gluten-free.

Disclosing solution turns new plaque red, old plaque blue. Erythrosine free.

Dry tips are superior to cotton rolls. Effective coverage of parotid orifice and buccal mucosa.

Introducing Osseo 100+

Osseointegration Monitoring Device

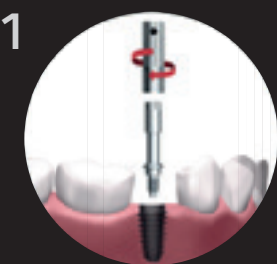

Reduce treatment time
One stage, immediate loading, early loading.

Manage higher risk patients
Compromised bone, smokers, bruxism, diabetes, cancer, osteoporosis, grafts, membranes etc.

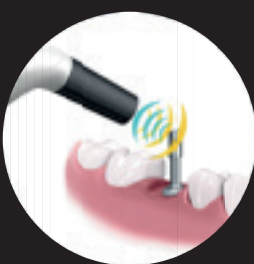

Osseo 100+ measures implant stability and osseointegration to enhance decisions about when to load the implant. This is invaluable when using protocols with shorter treatment times and treating higher risk patients.

The simple steps to measures the ISQ value allow the implant loading period to be planned in advance. The reconstruction of crowns and bridges can be predicted to minimise the risk of failures. Measurements can be made without unnecessary impact since the equipment does not come into physical contact with the implant or abutment.

Simple 3-step procedure

The MultiPeg™ is attached to the implant. It screws effortlessly into the implant's internal threads. (approximately 6-8 Ncm of torque).

Just aim for the magnet on top of the MultiPeg™. Non-invasive, objective, accurate and repeatable. The peg is excited by magnetic pulses and vibrates due to the stiffness in the contact area between the bone and the implant surface

An ISQ value is generated and shown on the display. This reflects the level of stability on the universal ISQ scale - from 1 to 99. The higher the ISQ value, the more stable the implant

Decreasing micro mobility with increasing ISQ values

ISQ Value

60

70

More time required for implant osseo-integration

ISQ values measured for one or two stage full or partial cases

ISQ values measured for single tooth one stage and/or immediate loading cases

The below is not a clinical recommendation from NSK.

YOU PURCHASED THE
BEST EQUIPMENT...
NOW GIVE IT THE
BEST **NSK CARE**.

Our highly trained engineers will restore your equipment back to ‘box fresh’ condition using genuine NSK components.

NSK care has been established in the UK to offer factory certified direct technical servicing and repair of all NSK products including NSK handpieces, NSK micromotors and NSK piezo electric ultrasonic scalers. This NSK service is available to all dental practices and laboratories throughout the United Kingdom.

Our highly qualified NSK technicians are factory trained to restore NSK products to original factory performance specifications. We use NSK factory diagnostic equipment to accurately and quickly diagnose problems and, then, to properly correct them. Only genuine NSK Factory spare parts are installed to restore products to original peak performance.

Sending your NSK products to NSK care guarantees sustained future reliability and durability, and restores original factory performance.

DAILY PRODUCT CARE.

NSK care Service Plan Cost Examples

Prices are indicative examples of NSK care Service Plan costs per month, per item excluding VAT.

Turbines	£10.50
Speed increasing contra-angles	£17.50
Surgical instruments	£14.50
Internal irrigation/LUX 1:1 contra-angles and straight handpieces	£8.50
FX and EX range	£6.50
Air Scaler	£11.50

All prices are subject to VAT at the applicable rate. Monthly payment by direct debit. Minimum term of 3 years.

NSK care Service Plans

Regular servicing and maintenance of any equipment is vital to keep it functioning correctly and reliably at all times. In order to help with this, NSK have developed a range of NSK care Service Plans which aim to optimise the lifespan and performance of your NSK equipment ensuring complete peace of mind. NSK care Service Plans allow you to stay in total control of the costs knowing that all work carried out will be completed by NSK engineers using only original NSK parts. There will be no price increase during the 3-year term of the contract.

NSK care Service Plans Include:

- All service work for the duration of the 3-year contract payable by 36 monthly instalments
- Accidental breakdown cover
- All postage costs covered
- Loan handpieces subject to availability
- On site Care and Maintenance staff training on request

“For the nature of my work and the volume of work I do, I cannot afford to be without my equipment for any length of time, and the downtime costs me alot of money. That’s why, for my own peace of mind, I have taken out a 3 year top-level Gold surgical equipment maintenance contract designed to optimise the lifespan and performance of my surgical eqipment. This ensures all my particular needs are covered - I can’t fault the service I received.”

iClave plus

B-type vacuum autoclave

Affordable and reliable B Type sterilisation

The current climate has forced a re-evaluation of the decon process. In many cases this has highlighted that the UK lags behind the rest of Europe in terms of sterilisation, where only vacuum (b-type) autoclaves using a full vacuum cycle are allowed to be used on a day-to-day basis.

This guarantees items like handpieces are sterilised not just on the outer covering. To achieve this peace of mind, it requires investment, but is balanced by the extended life this gives to dental instruments.

Upgrading to a vacuum autoclave (b-type)

Instruments are pouched & fully dry inside. Pouching eliminates contamination (soil/chemicals/oil) from other instruments.

Pouching extends storage time, which limits over reprocessing of less used instruments.

Suitable for handpieces, as they also sterilise the inside (the lumen) of the handpiece, which non-vacuum (n-type autoclaves) are not able to do*.

Long term savings

Full universal 134° cycles are kinder on your rotary instruments, extending their life & ensuring less is spent on handpiece repairs.

A modern b-type autoclave with an efficient drying cycle (eg iClave Plus) will eliminate many handpiece care & maintenance issues including corrosion & discolouration.

Less repairs = longer lasting instruments = long term savings

- Reduce your purchasing and operating costs with the NSK iClave plus
- Copper chamber technology increases performance and reduces maintenance costs
- Fast 40 minute B Type cycle with drying
- 18 minute flash cycle for unwrapped loads
- Suitable for all loads including pouched hollow and porous items
- Fully validated for implant kits
- 2 year warranty

Traditional chamber

iClave chamber

iClave plus RRP £5,758

extended warranty on
NSK instruments and repairs

Unit size – H428 x W445 x D532mm, 18L chamber

*Winter S, Smith A, Lappin D, McDonagh G, Kirk B, Failure of non-vacuum steam sterilization processes for dental handpieces, Journal of Hospital Infection (2017), doi: 10.1016/j.jhin.2017.09.004.

Purity

RO unit with built-in filters, providing high quality water for sterilisation. Auto water feed available for NSK's autoclave the iClave Plus.

iMax S

S-type autoclave

All the benefits of a traditional displacement autoclave, but effective for the correct sterilisation of handpieces.

- Rapid 20 minute cycle with drying for unwrapped or solid loads
- 25 minute handpiece cycle designed to provide effective sterilisation and prevent damage

- 18 litres
- Copper chamber technology increases performance and reliability, helping reduce maintenance costs
- Low energy consumption
- Efficient drying phase, gentle for handpieces
- Separate reservoirs – doesn't re-use water
- Easy to use control panel

iCare

Handpiece oiling & maintenance unit

Complete your handpiece care

- Simple automated handpiece care for all major brands
- Processes up to four handpieces (from 28 seconds each)
- Consistent results time after time, which reduces repair costs
- Effective internal cleaning, harmful contaminants are removed and ensures handpieces can be sterilised correctly in the appropriate autoclave
- Automatically removes excess oil, minimising autoclave damage
- More cost effective than using cans of oil

iCare C2 RRP £2,388
2 high speed, 2 slow speed ports
