SOLUTIONS & PROMOTIONS

TIME TO SWITCH

NEW Ti-Max Z95L

Select between mist or jet spray at the flick of a switch with the world's first two way spray technology. When extra safety is needed the water jet provides maximum protection while still offering optimum cooling, then when conditions allow switching back to mist is a breeze. No equipment modification is needed, put the control back in your hands.

Go Electric with NSK & reduce aerosols

Accurate and clean margins are the most important factor when achieving the best digital scan. Electric driven speed increasing handpieces are the best option when looking for the control and torque you need to produce accurate margins.

What is a speed increasing handpiece?

A contra-angle that does everything a turbine (high speed) does and uses the same FG burs. BUT it has incredible 'torque' originating from the micromotor which puts it in a league of its own and puts you in total control - no more loss of power as you come into contact with the tooth. Choose your speed. Save time cutting preps.

What motor do I need to use speed increasing handpieces?

It must be an electric micromotor (NOT an air motor) as the gears inside (usually 1:5) need the electrical power to run at a high speed. These ultimate brushless electric micromotors can be retro fitted by an engineer or come as an option when buying new chairs. NSK's NLX micromotors offer a powerful 3.4Ncm of torque.

Can I run my old contra-angles (slow speed handpieces) on it?

Yes, but with a micromotor and a control panel you have the option to slow the speed right down. You can now also use handpieces with internal spray and fibre optics.

Will there be any wires showing?

A built-in version will not show any wires.

Always check compatibility to upgrade.

Non-retraction valve prevents suckback/contamination of the water line

Options for Speed Increasing Handpieces (1:5)

	S-Max		Ti-Max
Model	M95 (non-optic)	M95L (optic)	Z95L (optic)
Mist to water jet switch			X
Lightweight titanium outer casing			X

AFFORDABLE, RELIABLE & RAPID VACUUM STERILISATION

Covid-19 has forced a necessary re-evaluation of handpiece decontamination in today's dental practices. As a global leader in dental handpiece manufacture and decontamination, NSK SMART 3 Decontamination solutions let you focus on protecting your patients from the risk of transmission of harmful pathogens by improving the standard of handpiece reprocessing in the three crucial areas of cleaning, lubrication and sterilisation.

SAFER – compared with inconsistent manual processes and the frequent use of incorrect autoclaves / cycles*.

MEASURED – employing proven systems that dose the correct volumes of cleaning and lubricating solutions, handpieces can be sterilised using the correct autoclave/cycles – S or B type vacuum.

AFFORDABLE – ensures cost savings, both in terms of the decontamination equipment and consumables required, over-reliance on expensive inventory and the reduction in on-going maintenance costs for both handpieces and decontamination equipment.

REPRODUCIBLE – provides consistent results, time after time, by removing the ambiguities associated with manual processes and a hit or miss approach to sterilisation.

TIME SAVING – decreases the time required to decontaminate handpieces, helping improve throughput and reducing costly delays in the process and for downtime as a result of breakdowns.

Extended warranty on NSK Handpieces with every new NSK autoclave

PROTECT IT All-Inclusive Maintenance and Breakdown Contracts for NSK autoclaves from just £645pa.

NSK Autoclave contracts are designed to protect your investment. Our team of experienced engineers are professionally trained and qualified to provide the level of care required to keep your investment in tip-top condition. With nationwide coverage we can provide the level of cover that suits your requirements – call for details.

One annual maintenance visit or every 1500 cycles	Additional maintenance visit for units exceeding 1500 cycles	All service parts and service sundries included	All breakdown calls*
All breakdown parts including labour*	All engineer travel in the UK†	Free on-site operator training	Free technical software upgrades

iMax S

Reliable and rapid S type vacuum autoclave – all the benefits of a non-vacuum autoclave with the ability to sterilise handpieces correctly^[i].

- 20 min flash cycles for unwrapped loads
- Rapid S type handpiece cycle in just 25 minutes
- Affordable, effective alternative to non-vacuum autoclaves

Only £2,995
or **£3,345** with 2yr cover
& annual maintenance

Rent for just £115pm†

iClave plus

High performance B Type vacuum autoclave – enhanced sterilisation of all loads, in rapid time.

- 18 min Flash cycle for unwrapped loads
- Fast 35 minute B Type cycle for all load types, including implant kits
- The simple, proven and reliable option for your next B type autoclave

Only £3,995
or **£4,345** with 2yr cover
& annual maintenance

Rent for just £155pm†

iCare

Automatically cleans and lubricates handpieces. In line with the NSK SMART³ decontamination protocol the iCare offers significant benefits over manual methods.

HALF PRICE £1,194

COPPER CHAMBER TECHNOLOGY

Improving Performance, Reliability & Affordability

- 18 litre high efficiency copper chamber improves total cycle times for faster throughput.
- Thermo-dynamic drying protects instruments from corrosion, discolouration and re-contamination.
- Helps extend the life of your rotary instruments, reducing the lifetime cost of handpiece repairs.
- Enhanced reliability and serviceability reduces your ongoing autoclave maintenance costs.
- Less repairs, longer lasting instruments, long term savings.

Learn more about the benefits of NSK Copper Chamber Technology

“The NSK iClave plus is a fantastic autoclave, as it has the perfect, 18 litre capacity and the instruments come out dry which is a real bonus that my nurse loves. We have worked with NSK for a number of years and their equipment and service are outstanding on every level.”

Optic SGL80M RRP £2,476 Y1004211

Osseo 100+
Osseointegration Monitoring Device

Osseo 100+ measures implant stability and osseointegration to enhance decisions about when to load the implant. This is invaluable when using protocols with shorter treatment times and treating higher risk patients. The simple steps to measures the ISQ value allow the implant loading period to be planned in advance. The reconstruction of crowns and bridges can be predicted to minimise the risk of failures. Measurements can be made without unnecessary impact since the equipment does not come into physical contact with the implant or abutment.

Osseo100+ RRP £2,388
Code Y1004176

30% off – only £1,672

Go beyond The new Surgic Pro2

Operability, safety and wireless extensibility: these are the crucial areas where the new Surgic Pro2 makes the difference. The NSK surgical micromotor system represents an extraordinary innovation, designed to give the best device, for the most effective, reliable and comfortable work experience.

There are so many good reasons to choose Surgic Pro2 – the progress, that lets you go beyond.

1 Improved operability/usability: More compact motor offers more comfort, less stress.

2 Safe and sensitive display: easy-clean screen and adjustable smart touch panel, usable when surgical gloves and surgical barrier sheets are in use.

3 Superb visibility high-contrast LCD panel. Adjusted with 10 brightness levels and intuitive icons allow smooth operation.

4 High-resolution colour LED light offers increased visibility, seeing blood and gingiva as if naturally lit.

5 Silent and smooth irrigation pump.

6 High torque accuracy made possible by the optimised torque calibration system (AHC). Offers maximum safety against exceeding torque during implant placement.

7 Enhanced decision making, by offering predictability and control on when to load an implant, especially when a shorter treatment time is given – see Osseo 100+.

8 Bluetooth extensibility to multiple devices - VarioSurg3, Osseo 100+, wireless foot control, iPads.

“

The NSK Surgic Pro has always been a superb piece of equipment and the advanced features incorporated in the new NSK Surgic Pro2 have made things better still.

As clinicians we depend on the reliability of our equipment on a daily basis and the Surgic Pro2 takes reliability to the next level.

The majority of the handpieces, implant and endo equipment we use on our courses at The Delta Dental Academy are supplied by NSK. That's why I added the NSK Surgic Pro2 to our inventory as a new central interface for all primary surgical applications.

”
