## NLX nano RETRO FITTED MICROMOTOR

Electric micromotors are the driving force behind speed increasing handpieces and can be fully integrated into the delivery system of most new and existing dental chairs. They can be retro fitted by an engineer or come as an option when buying new chairs. Controlling the specific speed and torque of micromotors within existing platforms is made easy thanks to built-in control pads.

Speed increasing contra-angles not only do everything a turbine does using the same FG burs, they provide a constant torque from the micromotor that does not decrease with resistance and higher load with no loss of power as they come in contact with the tooth.
