Restorative - Electric Micromotors

NLZ E

PORTABLE MICROMOTOR

Including reciprocating and rotary Endo features

A compact portable electric micromotor, for general & endodontic applications with contra angles (ie speed increasing/red band, 1:1 direct drive/blue band or speed reducing/green band).

- Lighter motor with enhanced power/torque
- Ideal for general (restorative, prophylaxis etc) and endo applications (rotary & reciprocating* modes)
- Enhanced patient safety function indicates when the handpiece needs repair to minimise overheating
- Versatile installation options – portable or semi built-in

* The 'Reciprocating Endo Mode' can be operated only with the NLZ Endo Contra-angle and WAVE ONE® file.
The NLZ requires access to a plug socket, and the use of an existing Midwest hose from the cart to gain access to coolant water/air and the existing foot control.

NLX

RETRO FITTED MICROMOTORS

Electric micromotors are the driving force behind speed increasing handpieces and can be fully integrated into the delivery system of most new and existing dental chairs. They can be retrofitted by an engineer or come as an option when buying new chairs. Controlling the specific speed and torque of micromotors within existing platforms is made easy thanks to built-in control pads.

Speed increasing contra-angles not only do everything a turbine does using the same FG burs, they provide a constant torque from the micromotor that does not decrease with resistance and higher load with no loss of power as they come in contact with the tooth.

Osseo 100+

OSSEOINTEGRATION MONITORING DEVICE

Osseo 100+ measures implant stability and osseointegration to enhance decisions about when to load the implant. This is invaluable when using protocols with shorter treatment times and treating higher risk patients.

The simple steps to measure the ISQ value allow the implant loading period to be planned in advance.

Multipeg List

“The Osseo device allows us to easily measure implant stability by assessing the increasing ISQ readings during the healing period. We use it routinely on sinus graft cases, when we place simultaneously, and also in cases with low stability at placement.”
