Carbon Reduction Plan

NSK United Kingdom Limited

Baseline year: 2023 | **Publication date:** 06 November 2026

1. Net-zero commitment

NSK United Kingdom Limited is committed to achieving **net zero emissions by 2050.**

2. Reporting boundary and methodology

We have used the **Operational Control** approach to setting our organisational boundary.

Baseline calculation note

In relation to categories 4 and 9, common practice has been adopted whereby deliveries inbound to the subject are recorded as upstream and shipments outbound from the subject are recorded as downstream. Categories 4, 6, 7 and 9 emissions include their associated Well to Tank emissions, hence category 3 has also been calculated.

3. Emissions footprint

Baseline emissions record the greenhouse gases produced before the introduction of emissions reduction strategies and provide the reference point against which reductions can be measured.

2023 baseline emissions

Emissions source	Emissions (tCO2e)
Scope 1	33.32
Scope 2	23.13
Scope 3 — included sources	100.23
Total emissions	**156.68**

Current emissions reporting

This is a baseline report and does not include emissions for later reporting periods. These are currently being measured, and updated reporting will follow when complete.

4. Emissions reduction targets

NSK United Kingdom Limited is committed to achieving Net Zero emissions by 2050 and will monitor performance against its 2023 baseline through annual reviews. Interim reduction targets are not specified in this plan; these will be approved through the company's governance process and reported in future annual Carbon Reduction Plan updates.

5. Carbon reduction programme

Completed carbon reduction initiatives

The following environmental management measures and projects have been completed or implemented since the 2023 baseline. They will remain in effect when performing the contract, and their impact on carbon emissions is being evaluated.

Solar Photovoltaic system

- Solar PV panels have been installed at Hertford House to generate electricity on site and reduce reliance on purchased electricity. The resulting emissions reduction is being evaluated and has not yet been quantified in this plan.

Current electricity-supply position

- At Hertford House, NSK United Kingdom Limited is confirming the source and contractual arrangements for electricity purchased in addition to electricity generated by the onsite solar photovoltaic system. At its former Gateway 1000 premises, the company controlled the electricity supply arrangement and previously procured electricity through a green energy tariff.

Future carbon reduction initiatives

- NSK United Kingdom Limited intends to procure electricity through an appropriately evidenced renewable electricity tariff when current arrangements are clarified over electricity procurement at Hertford House.
- Electricity consumption, onsite solar generation and the source of purchased electricity will be monitored through the company's annual carbon emissions reporting.

Further measures are proposed to address Scope 3 emissions, focusing on the quality of transportation and distribution data and suppliers' plans to decarbonise their fleets.

- Gain an improved understanding of emissions from transportation and distribution by requiring our suppliers to provide better quality data
- Engaging with our suppliers to understand how they plan to de-carbonise their fleet over time.

6. Declaration and approval

This Carbon Reduction Plan has been completed in accordance with PPN 006/21 and associated Carbon Reduction Plans reporting standard.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard13 and uses the appropriate government emission conversion factors for greenhouse gas company reporting.[14]

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.[15]

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the supplier:  ALEXANDER BREITENBACH
